

TBX isn't just a replacement for Tdata — it builds on it.

By connecting FAA data, integrating operational tools, and simplifying compliance tracking, TBX provides a complete solution for today's mechanics. The result: smoother workflows, stronger compliance, and more time for what matters most — keeping aircraft airworthy.

guidance directly into the user's workspace—creating a faster, smarter, and more connected experience.

Then: Tdata's IApproach

Served as a comprehensive AD research and compliance support tool for General Aviation and Corporate aircraft.

Tdata vs TBX Comparison

	Tdata	твх
Platform Type	Developed on older desktop software providing AD and regulatory data for aircraft maintenance compliance.	100% web-based – no installation required: access anywhere. Fully compatible with Mac, mobile devices, and computers without DVD drives.
Technology	Older platform architecture; upgrades are slow and system stability can be fragile.	Cloud-based, combining Tdata and AD Toolbox technologies for end-to-end maintenance and compliance management. Built for speed, reliability, and scalability.
Data Source	Static technical library updated periodically via physical media.	Live, automated FAA data integration with daily updates for ADs and SBs.
Airworthiness Directives (ADs)	Searchable AD database by make/model/part number.	FAA database integrated for convenient, one-click access to ADs within the workspace.
Serial-Number-Specific AD Filtering	Manual lookup; users must cross-check applicability.	Airframe ADs include serial number applicability to help users identify relevant directives more efficiently.
Parts & Inventory	No parts integration.	Know what's in your shop with integrated inventory management.
Compliance Reports	Manual compilation.	Automatically generated, shareable digital compliance reports.
Built-In Business Functions	Not supported.	Includes work orders, quotes/estimates, and invoicing—bridging compliance with day-to-day business operations.
Support & Documentation	Limited online resources; support limited to PDF manuals and a small phone/email team. Customer relationship system outdated, lacking detailed information.	Integrated Knowledge Base (help.airworthy. com) with video tutorials, FAQs, and direct phone/email support. With combined teams from both companies, support capacity has doubled—delivering faster, more personalized assistance.
Customer Feedback & Improvement	No structured customer feedback system.	CRM-based feedback tracking allows TBX to rapidly implement user-suggested improvements.
File Management	Local storage (risk of data loss or corruption).	Cloud-based storage with secure backups, accessible from any web-connected device.
User Experience	Manual workflows, slower updates, DVD installations.	Intuitive interface with streamlined search, smart filtering, and instant updates.
